

Step-by-Step Guide to Set Up PHPMailer in an HTML Website

Step 1 :

Use this command to install php mailer package in the project

```
composer require phpmailer/phpmailer
```

Step 2 :

Create Contact Us HTML Form for Fetching data from users

Use This sample code

```
<!DOCTYPE html>
<html>
<head>
  <title>Contact Form</title>
</head>
<body>
  <form action="send_email.php" method="POST">
    <label for="name">Name:</label>
    <input type="text" id="name" name="name" required><br><br>
    <label for="email">Email:</label>
    <input type="email" id="email" name="email" required><br><br>
    <label for="message">Message:</label><br>
    <textarea id="message" name="message" rows="4" cols="50"
required></textarea><br><br>
    <input type="submit" value="Send">
  </form>
</body>
</html>
```

Step 3 :

Use this code for setting up smtp and fetching form data

```
<?php
require 'vendor/autoload.php';

use PHPMailer\PHPMailer\PHPMailer;
use PHPMailer\PHPMailer\Exception;
```

```

if ($_SERVER["REQUEST_METHOD"] == "POST") {
    $name = $_POST['name'];
    $email = $_POST['email'];
    $message = $_POST['message'];

    $mail = new PHPMailer(true);
    try {
        //Server settings
        $mail->isSMTP();
        $mail->Host = 'mail.domain.in'; // Set the SMTP server to send through
        $mail->SMTPAuth = true;
        $mail->Username = 'amal@domain.in'; // SMTP username
        $mail->Password = 'your-email-password'; // SMTP password
        $mail->SMTPSecure = PHPMailer::ENCRYPTION_SMTPS; // Enable TLS encryption;
        `PHPMailer::ENCRYPTION_SMTPS` encouraged
        $mail->Port = 465; // TCP port to connect to

        //Recipients
        $mail->setFrom('amal@vianinfosolutions.in', 'Mailer');
        $mail->addAddress($email, $name); // Add a recipient

        // Content
        $mail->isHTML(true); // Set email format to HTML
        $mail->Subject = 'Here is the subject';
        $mail->Body = 'This is the HTML message body <b>in bold!</b>';
        $mail->AltBody = 'This is the body in plain text for non-HTML mail clients';

        $mail->send();
        echo 'Message has been sent';
    } catch (Exception $e) {
        echo "Message could not be sent. Mailer Error: {$mail->ErrorInfo}";
    }
}
?>

```

Step 4 :

After Set up This Files Contact Form Should be work and will receive emails – After Submitting contact form inspect it and check the network tab and confirm send_email.php file gives a 200 status
